

Torsion in Shafts. Question 5-33 Solution

Sunday, 9 March, 2025 09:22 AM

•5-33. The gear motor can develop 2 hp when it turns at 450 rev/min. If the shaft has a diameter of 1 in., determine the maximum shear stress developed in the shaft.

•5-33. The gear motor can develop 2 hp when it turns at 450 rev/min. If the shaft has a diameter of 1 in., determine the maximum shear stress developed in the shaft.

$$T = \frac{P}{\omega}$$

Solved $P = 2 \text{ hp} \times 550 = 1100 \text{ ft} \cdot \text{lb/s}$

by $\omega = 2\pi N = \frac{2\pi \times 450}{60} = 15\pi \text{ rad/s}$

$$\Rightarrow T = \frac{1100}{15\pi} = 23.34 \text{ lb} \cdot \text{ft} = 280.11 \text{ lb} \cdot \text{in}$$

Civil $J = \frac{\pi}{2} (0.5)^4 = 0.03125\pi$

Thinking

We know!

$$\frac{\tau_{\max}}{R} = \frac{T}{J} \quad [\text{Torsion Equation}]$$

Civil $\Rightarrow \tau_{\max} = \frac{R}{J} \times T = \frac{0.5}{0.03125\pi} \times 280.11 = 1.43 \text{ ksi}$
